

24-inch Diameter Modular Plastic Pontoons

Patent Pending

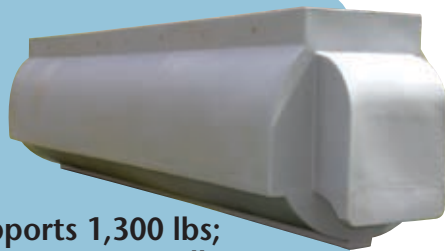

The Best Idea Since the Indian Canoe

Bow Module
8 ft. and 12 ft.

New hull design for high performance and greater lift.

Middle Module
8 ft. and 12 ft.

**8 ft. module supports 1,300 lbs;
12 ft. module supports 1,950 lbs.**

Stern Module
8 ft. and 12 ft.

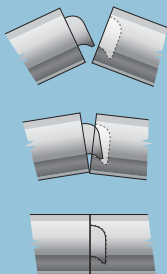

Each module has a keel.

Connected Modules
24 ft. Log (Three 8 ft. Chambers)

Configurable to popular application sizes.

Locking Joints

Unique hinged coupling system.

Wilson Distribution pontoons are constructed out of medium density polyethylene (MDPE). Wilson pontoons are perfect for salt water because they won't rust or corrode. They're excellent replacements for old steel or aluminum pontoons. Wilson pontoons are used in pontoon boats, houseboats, barges, bridges, work boats, party boats, pumping stations – they're perfect for any application that uses pontoons. Features include:

- Heavy-duty construction: pontoon modules have 1/4"–3/8" thick walls. Wilson pontoons will withstand a greater impact than aluminum pontoons.
- Modular construction: all modules come in 8 ft. and 12 ft. lengths, easily allowing for configurations of the most popular application sizes (i.e. 16 ft., 20 ft., 24 ft.).
- All pontoon modules are filled with closed cell polyurethane foam for greater structural stability, which also helps retain shape over the life of the module. Punctures will not collapse the pontoon module, and it won't fill with water.
- Rectangular collar has threaded stainless steel 3/8" molded inserts for quick attachment.
- Maintenance free: no bottom painting is required. Just pressure-wash to clean.
- UV protected.
- Standard color: tan.
